

Mesos — Heartbeat: Ping / Pong

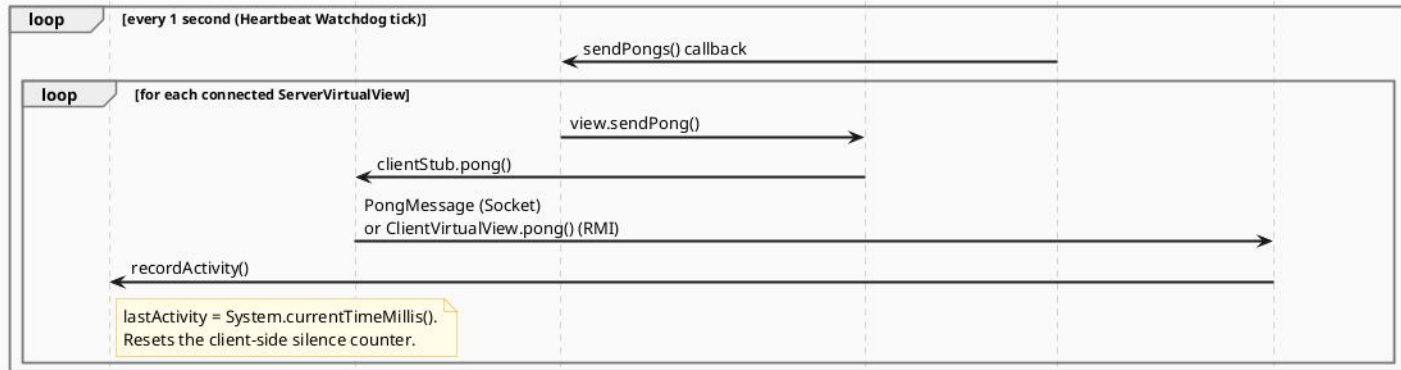

Heartbeat starts as soon as the game begins (setupAndStartGame / startLoadedGame).
 Constants: INTERVAL = 1s, MISSED_PING_THRESHOLD = 5, PONG_THRESHOLD_MS = 5000ms.
 Both directions are independent: client pings server, server pongs client.

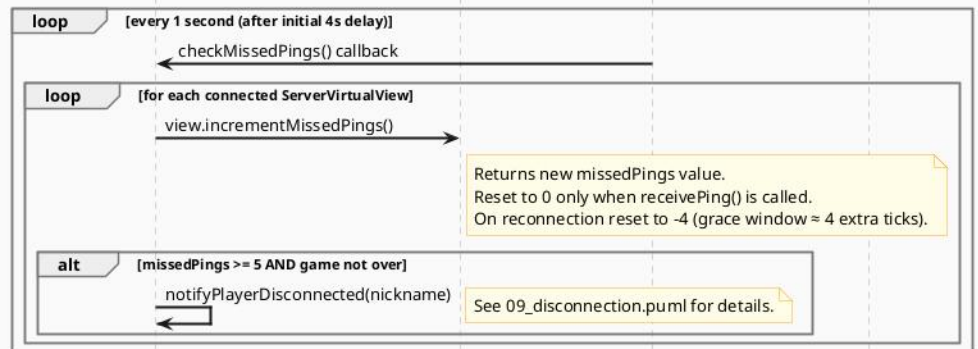

Client → Server: periodic ping (every ~1s)

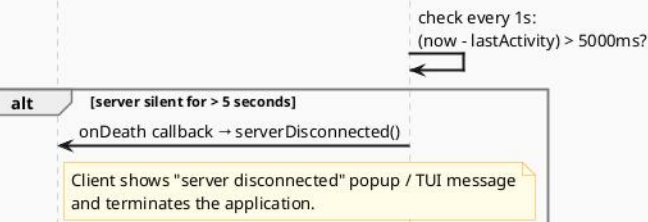

Server → Client: periodic pong (every 1s, server scheduler)

Server-side: check for missed pings (every 1s, after 4s grace)

Client-side: PongWatchdog death detection

Socket transport: every incoming ServerToClientMessage from ServerListener also calls PongWatchdog.recordActivity() — so any game message resets the timer, not just explicit PongMessage.
 RMI transport: only an explicit pong() call resets the timer.
